

The AI Taxonomy *worksheet.*

Place every AI tool your practice uses, or is considering, into one of four categories. The category sets the risk profile, the governance requirement, and the conversation you need to have.

<i>i.</i> General Purpose CHATGPT · COPILOT · GEMINI · CLAUDE Broad, public-facing models. The most capable, the least specialized. Risk is high specifically because the surface area is unbounded. Anything can be typed in, anything can come out. RISK	<i>ii.</i> Bolt-On AI INSIDE CRMS, EMAIL, DOCUMENT SUITES Features added to tools you already use. The data handling depends entirely on what the vendor does with it. Same vendor, different feature, different rules. RISK	<i>iii.</i> Function-Specific NOTE-TAKERS · TRANSCRIPTION · SUMMARY TOOLS Built for one job. Narrower surface area, narrower risk, and a clearer consent conversation, when configured properly. RISK	<i>iv.</i> FS-Specific CANADIAN COMPLIANCE-AWARE ADVISOR PLATFORMS Built for advisors with the rails baked in. Canadian residency, retention, audit trail, regulatory awareness. The category to grow into where possible. RISK
I. GENERAL PURPOSE E.G. ChatGPT	II. BOLT-ON E.G. Co-pilot in Office 365	III. FUNCTION-SPECIFIC E.G. Otter	IV. CANADIAN FS-SPECIFIC E.G. Friedmann
